

s41 Litterbin (mild steel) care and maintenance guidelines

The s41 litterbin is constructed from zintec steel with a galvanized steel lid. It is finished in polyester powder, a plastic coating which is baked onto the components prior to assembly.

Maintaining the painted steel

Clean the bin inside and out regularly using warm soapy water. Avoid the use of abrasive cleaners as they may damage the surface finish. Where the surface becomes damaged clean with a wire brush and or sand, prime with a zinc rich primer then paint with a spirit or synthetic based top coat. Omos recommends *Trimite* products. Contact their technical department for details of paint products and application techniques. For further advice contact Omos on + 353 45 899802.

Maintaining the galvanized steel lid

Clean regularly with warm soapy water and a scouring pad. Should the galvanized coating be penetrated apply 'cold galvanizing' paint to damaged area. For more information on remedial work contact Omos.

Liner

The s41 litterbin is equipped with a 115L galvanized steel or ABS plastic liner. To prolong the life of the liner Omos recommends using plastic bin liners. This will also prevent seepage of liquids onto the surrounding pavement.

Locks, hinges and other moving parts

All moving parts should be kept clean and lubricated to ensure a long life. A spray lubricant such as 'WD40' is widely available and well suited.
